

LANMASTER wall mount patch panel with front access to termination blocks, 12 port, UTP, cat. 5E

Product Code: [LAN-PPF12U5E/W](#)

LANMASTER wall mount patch panel with front access to termination blocks, 12 port, UTP, cat. 5E

Description

12 port patch panel with front access to cable termination blocks is designed for wall mount. Type 110 cable termination blocks are accessible from the front side of the panel, which allows cabling to the panel ports after installation on the wall, without dismounting the panel and without affecting the ports that are already in operation.

The panel's removable front cover for the IDC blocks has number labels for each port and areas for additional labels. IDC blocks are color-coded and numbered according to T568B wire map.

The small size of the patch panel and the convenient mount system allow it to be used as a consolidation point or multi-user outlet. This panel can also be a commutation center for small offices or retail outlets.
